A significant oddity developed.

From the beginning downloads were pretty reasonable.

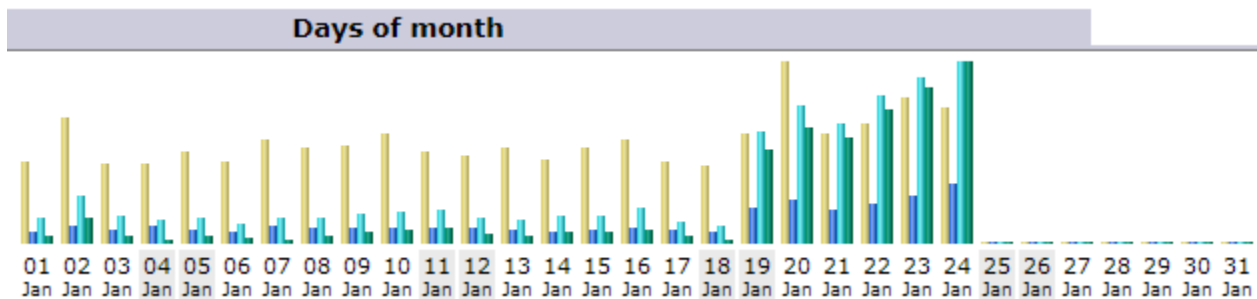

On the 30th 11.27GB was downloaded.

On the 21st 12.96GB.

Then, on the 25th, downloads dropped significantly. The 26th represents 1.46GB.

On the 2nd 1.89GB.

This continued until the 19th when downloads resumed their previous levels. The 24th represents 13.64GB.

Now, the drop occurred on Christmas then resumed the day before Trump's inauguration.

Over the years I've come to realize that coincidences don't exist.

Without further information I will assume that this is simply children at play, trying to impress me.

They don't give a damn about our humanity or planet, the process.

I have my suspicions but need verification. Here are my cleaned-up log files for [Dec](#) and most of [Jan](#).
